EDUCATION

Bachelor's Degree in Informatics Engineering
FIB, UPC · Sept 2023 – present
Fourth year

Baccalaureate, technology track
Maristes Rubí · 2021 – 2023
Research project: AI-based facial recognition

SKILLS

LANGUAGES
Dart, TypeScript, JavaScript, Python, C++, PHP, SQL, MATLAB
FRAMEWORKS
Flutter, Angular, Laravel, React, React Native (Expo), Next.js, Node.js
DATA AND SERVICES
PostgreSQL, Supabase, SQLite, RevenueCat, Stripe, Brevo, Google Wallet
TOOLS
Git, GitHub Actions, Codemagic, Sentry, Jest, Vitest, Playwright, Maestro, Slurm

LANGUAGES

Catalan and Spanish: native
English: intermediate

VOLUNTEERING

Scout leader with Agrupament Escolta Albada (Rubí), third year

Pau Sevilla Rodríguez

Full-stack and mobile developer

I started coding at 14. I'm a fourth-year Informatics Engineering student at FIB (UPC), I've worked at inLab FIB since December 2024, and I publish my own apps: Vademecum, the longest-running, has over **10,000 downloads**.

EXPERIENCE

inLab FIB (UPC)
Dec 2024 – present

Student developer · full-stack and scientific computing

- **LaCàN library** (C++, Python). I'm responsible for refactoring the C++ and Python code of the open-source computational engineering library from LaCàN, UPC's numerical computing lab, which was ported from MATLAB to C++ years ago: modern C++, Python bindings and tests. A separate team builds the interface and the server.
- **From MATLAB to C++** (two semesters). I ported a data compression algorithm from MATLAB to C++ and optimised it, changing its data structures so they used less memory.
- **HPC portal for the BIT group at the Barcelona School of Civil Engineering** (Angular, Node.js), part of the European E-Med project. A web app the group uses to submit Slurm jobs to its server. I handled the frontend, the backend and the job queue.
- **TurnItOn** (Angular, Laravel). I built the frontend and backend of the lab's new web app for controlling computers remotely: switching them on and connecting to them. It replaced a badly outdated tool.

PERSONAL PROJECTS

Vademecum
2023 – present

Flutter · SQLite · Supabase · RevenueCat

I rebuilt a badly outdated medicines reference app from scratch in Flutter, using official data from AEMPS, Spain's medicines regulator: encrypted on-device database, real-time sync with Supabase and subscriptions through RevenueCat. **10,000+ downloads** on Google Play and rated **4.8** on the App Store (13 ratings).

Vademecum Veterinario
2026

Flutter · Node.js · Supabase · GitHub Actions

Over 3,700 veterinary medicines from CIMAVet, the Spanish regulator's veterinary database, available offline. A backend downloads, validates and publishes the catalogue daily and opens a GitHub issue if anything fails. I cut the download time from 29 to 16 minutes.

Apto: Spanish driving theory test
2026

Flutter · SQLite · Python

Prep app for the DGT car, motorbike and moped theory tests: **over 1,500 car questions** and over 500 each for motorbike and moped, every one citing its official source. Question packs are built with Python, linted in CI and signed before they reach the app.

Parcelario
2026

Flutter · MapLibre · SQLite

Map viewer for Spanish land parcels from SIGPAC and the Cadastre over official PNOA aerial imagery: search by polygon and parcel number or cadastral reference, and measure plots. A scheduled workflow checks twice a day that the public APIs it relies on are still up.

Manipulador Hoy · manipuladorhoy.es
2026

Expo · React Native · TypeScript · Supabase · Stripe

Food handler certificate on web, iOS and Android: free exam, payment via Stripe and a certificate verifiable by QR code, with Google Wallet and an assistant built on the Claude API. Launched in 2026 and **already making sales**.

Flipebooks · flipebooks.com
Feb – Aug 2026

Next.js · TypeScript · Supabase · Stripe · Vercel AI SDK

Together with another developer, we built a web app that turns PDFs into interactive flipbooks, with paid plans and plenty of AI: automatic document translation, alt text for images, SEO metadata, analytics insights and a chat about the document.

BUILDING WITH AI

For the past year I've been developing with AI agents (Claude Code and Codex), always under my supervision. I also design how they work (*harness engineering*): I set up agents, subagents, skills and per-project instructions. I review the code they generate, and everything passes the tests before it ships. I build AI into my products, such as the Manipulador Hoy assistant and Flipebooks' automatic translation.
