EDUCATION

Bachelor's Degree in Informatics Engineering
FIB, UPC · Sep 2023 – present
Fourth year

Spanish Baccalaureate, technology track
Maristes Rubí · 2021 – 2023
Research project: AI-based facial recognition

SKILLS

PROGRAMMING LANGUAGES
Dart, TypeScript, JavaScript, Python, C++, PHP, SQL, MATLAB
FRAMEWORKS
Flutter, Angular, Laravel, React, React Native (Expo), Next.js, Node.js
DATA AND SERVICES
PostgreSQL, Supabase, SQLite, RevenueCat, Stripe, Brevo, Google Wallet
TOOLS
Git, GitHub Actions, Codemagic, Sentry, Jest, Vitest, Playwright, Maestro, Slurm

LANGUAGES

Catalan and Spanish: native
English: intermediate

VOLUNTEERING

Scout leader with Agrupament Escolta Albada (Rubí), third year

Pau Sevilla Rodríguez

Full-stack and mobile developer

I started coding at 14. I'm a fourth-year Informatics Engineering student at FIB (UPC) and have worked at inLab FIB since December 2024. I also publish my own apps: Vademecum, the oldest, has over **10,000 downloads**.

EXPERIENCE

inLab FIB (UPC)
Dec 2024 – present

Full-stack and scientific computing developer (student intern)

- **LaCàN library** (C++, Python). I'm refactoring the C++ and Python code of the open-source computational engineering library from LaCàN, UPC's numerical computing lab (ported from MATLAB to C++ years ago): modern C++, Python bindings and tests. Another team builds the interface and server.
- **From MATLAB to C++** (two semesters). I ported a data compression algorithm from MATLAB to C++ and optimised it, reworking its data structures to use less memory.
- **HPC portal for the BIT group at the Barcelona School of Civil Engineering** (Angular, Node.js), part of the European E-Med project. A web app the group uses to submit Slurm jobs to its server. I handled the frontend, backend and job queue.
- **TurnItOn** (Angular, Laravel). I built the frontend and backend of the lab's new web app for remotely switching on and connecting to computers. It replaced a badly outdated tool.

PERSONAL PROJECTS

Vademecum
APP · 2023 – present

Flutter · SQLite · Supabase · RevenueCat

I rebuilt a badly outdated drug reference app from scratch in Flutter, using official data from AEMPS (Spain's medicines regulator): encrypted on-device database, real-time sync with Supabase and subscriptions through RevenueCat. **10,000+ downloads** on Google Play and rated **4.8** on the App Store (13 ratings).

Vademecum Veterinario
APP · 2026

Flutter · Node.js · Supabase · GitHub Actions

Offline access to **over 3,700 veterinary medicines** from CIMAVet, the Spanish regulator's veterinary database. A backend downloads, validates and publishes the catalogue daily and opens a GitHub issue if anything fails. I cut the download time from 29 to 16 minutes.

Apto: Spanish driving theory test
APP · 2026

Flutter · SQLite · Python

Prep app for the DGT car, motorbike and moped theory tests: **over 1,500 car questions** and over 500 each for motorbike and moped, each citing its official source. Question packs are built with Python, linted in CI and signed before they reach the app.

Parcelario
APP · 2026

Flutter · MapLibre · SQLite

Map viewer for Spanish land parcels from the SIGPAC farm register and the Cadastre over official PNOA aerial imagery: search by polygon and parcel number or cadastral reference, and measure plots. A scheduled workflow checks twice a day that the public APIs it relies on are still up.

Manipulador Hoy
WEB & APP · manipuladorhoy.es · 2026

Expo · React Native · TypeScript · Supabase · Stripe

Food handler certificate app for web, iOS and Android: free exam, Stripe payments and a QR-verifiable certificate, with Google Wallet support and an assistant built on the Claude API. Launched in 2026 and **already making sales**.

Flipebooks
WEB · flipebooks.com · Feb – Aug 2026

Next.js · TypeScript · Supabase · Stripe · Vercel AI SDK

Another developer and I built a web app that turns PDFs into interactive flipbooks, with paid plans and AI throughout: automatic document translation, image alt text, SEO metadata, analytics reports and chat with the document.

BUILDING WITH AI

For the past year I've been developing with AI agents (Claude Code and Codex), always under my supervision. I also design how they work (*harness engineering*): I set up agents, subagents, skills and per-project instructions. I review the code they generate, and nothing ships until it passes the tests. I build AI into my products, such as the Manipulador Hoy assistant and Flipebooks' automatic translation.
